

1.121.0 Release Notes

Release date: 2026-03-24

New Functionality

Developer Guide

Available to all users and in an effort to help understand how to use tokens within ReferOn for more development based calls, a new area found in Profile - Developers will present instructions and how-to guides on how to set up and use the tokens in ReferOn.

The page is split into 3:

- Overview
- Token Generation
- Rate Limits

Token generation

Overview

Token generation

Rate limits

Overview

External systems can utilize the ReferOn APIs to access data on affiliate activities, and the following requirements are met

- User Registration**
The user must be registered as an affiliate or any other role in the ReferOn system to retrieve information
- API Token Generation**
Connection requires a unique token generated within the ReferOn user interface
- Authentication Method**
All API requests must include the generated token in the Authorization header

Access token generation

The recommended and safest way to get an API token is to use a Personal Access Token

STEP	ACTION
Log in to Referon	- Op - Lo
Enable two-factor authentication (2FA)	- Go - En - Co - rec
Create a Personal Access Token (PAT)	- In - Cri - Ch - Co - ag

Access token usage

Use the Personal Access Token as a Bearer token in the Authorization header

This is also connected with a small change in Account Settings in which we show a new area called 'Partner ID'. This is used within the token and API calls.

Account settings

View and update your personal information and sign-in method

Profile information

Partner ID

Sign-in method

PAT

Sessions

Partner ID

Used for API integration

AFFILIATE PROGRAM	PARTNER ID
	137
	237

Sign-in method

Fixes

- Dynamic Variables in the reports were truncated in the previous release. This has now been fixed.
 - Small bug fixes and UI improvements across the platform.
