

# 1.50.0 Release Notes

Release date: 2024-01-17

## New Functionality

### Click Report

For some time, we have received queries and further deep investigations on affiliate traffic to help identify bot traffic or referrer URLs. Following on from these requests we have designed a NEW report - Clicks.

It has similar features to the General Report but differs in the following ways:

- Shows Clicks, Unique Clicks, CPC and CPC Count ONLY
- Shows Referrer URL, Browser Name, OS Name AND Device Type in addition to existing features

Much like Reports, these can also be API formats as well.

You also have the option of extracting by Raw Data or Grouped Data they differ via:

- Raw Data: Data split by click
- Grouped Data: data split by the group by columns

- In some cases, the report can be very large as its showing details of every click, extracting by CSV therefore may take time.
- You may also adjust the Raw/Grouped Data in API via ...&sourceData=false or &sourceData=true

# Fixes

- Password recovery emails will now include the Program Name in the Email Subject and the username in the body text.
- Small bug fixes and UI improvements across the platform.
