

How do I use the reports and get an API?

The reports in ReferOn are a condensed version of most affiliate systems you might be familiar with. We have a single area of reporting which allows you choose any metric for any time split over any date range.

Configure it in a few steps:

1. Select your metrics - i.e. by campaign, by media item, by geo etc. - multiple items can be selected.
2. Select your date range - Various fixed date ranges can be used for example Current Month, Current Quarter, etc
3. Select any filters (if applicable) - Multiple items can be filtered at any one time, for example 1234,5678
4. Select your split by - For example total, per year, per month or per day.
5. Click Generate Report

Should you require an API for further third party tools, after generating the report do the following steps:

1. Click Create Preset
2. Insert a name
3. Enable API
4. Copy Link

Once copied, you can take the API link to any API connector and run the data freely. If you have created the report in a custom range, when you extract the API you can also freely change the date range without needing to regenerate the code.

More information can be found here: [How to Create API Reports](#)
